

IOAI Team Selection Colombia 2025

The Colombian Olympiad of Artificial Intelligence started last year with our participation in the first IOAI that took place in Bulgaria. Since then we have evolved and this year we are organizing the first Colombian Olympiad in Artificial intelligence, an event that took place nation wide with 110 participants in its first edition coming from the main cities like Bogota, Barranquilla, Medellín y Bucaramanga, as well as from small places far apart like Nobsa or Santander de Quilichao.

Our Olympiad is supported by the Universidad Antonio Nariño. For more than forty years they have been the founders, organizers and main sponsors of the different Olympiads in Colombia, in mathematics, physics, informatics, science and many others. Regular participation in international olympiads was accomplished for many years, but the financial support is often limited. Our math olympiad this year had more than 40000 participants and we hope that our olympiad in AI will grow eventually as well.

Our olympiad this year is composed of three stages. The first two were multiple choice questions in the same spirit as the eduspace platform questions. I attach the links to those exams in the links at the end. By the other hand, we want to use the Eduspace platform to reach more students due to its free nature, hoping that more curious students will approach the AI competitions. We will take into account the third round of the Eduspace competition in our team selection process and also invite the most prominent participants to our future training camps and AI activities to increase the level of the Colombian Olympiad.

Next week, from 27th to 30th of May we will hold the final round of our competition, where the best students are invited to the capital Bogotá and take two days of preparation and two days of tests that resemble the IOAI questions, but somehow easier and in an individual way. More than 40 students are invited to this final event but among them we will select the top 15 to prepare intensively, take the final team selection tests (including the Eduspace final round) to select the four students that will represent Colombia in the 2nd edition of the IOAI 2025 taking place in Beijing.
